Birth Trauma: Its Impact on Breastfeeding

In order to help clinicians understand the effects of birth trauma on mothers' decisions to breastfeed and on their breastfeeding experiences, Professor Cheryl Beck and Sue Watson, chairperson of TABS, are now conducting a study on this topic. Women who have experienced birth trauma and who, may or may not have been diagnosed with PTSD due to childbirth, are invited to participate in this study.

Just like Professor Beck's previous studies on birth trauma and PTSD after childbirth, this study will be conducted over the Internet. Mothers will be asked to describe their decision regarding breastfeeding and their experiences breastfeeding their infants.

If you are interested in participating in this research or wish to find out more about the study, please contact Professor Cheryl Beck directly at the University of Connecticut. Her email address is Cheryl.beck@uconn.edu
